## **Cost of Project**

This project has minimized the monetary cost of the entire system by using both free software as well as free trials wherever possible. This means that the cost of the system is close to \$0 even though we will rent a single web server and a single database from a cloud provider for the development of the system using their free tier. When the system is deployed, the size of the user base will determine if the web server and/or database need to be upgraded to a paid version.

The main cost of this project will come in man hours required for research, design, implementation, testing, and deployment. The overall time estimations for completing this project comes out to approximately 800 total man hours. These 800 man hours are divided amongst 7 separate sprints. If these sprints go according to the time estimations, then each of our 4 developers would have to average 12 hours a week in order to finish on schedule.

## **Risk Management**

The largest risk to this project is that each functionality takes longer to implement than was initially estimated. This may occur for due to a lack of understanding of the technology stack or a lack of understanding of how to implement the functionality. Both of these may lead to research and design taking much longer. In order to reduce this risk, developers have been researching these items before the need to use the technology or the need to implement the functionality.

However, sometimes it is inevitable for something to go wrong, whether it be a functionality taking too long to implement or scope creep during the middle development. To help mitigate the damage this may cause, another safety buffer is in place to help ensure that the entire project is finished on time. This safety buffer is the final sprint has less planned man hours to allow for roll over from previous sprints or more importantly, we can better handle scope creep that may come up during the implementation of the project.

## **Time Estimations**

The estimated time of individual tasks in our system, were determined by determining a realistic time the functionality would take to design, implement, and test. This realistic time was increased by 20% and then rounded up to the nearest Fibonacci number. This should hopefully provide a nice cushion for unforeseen circumstances.

As for error handling, while is is a separate functionality within the project BRD, error handling will be taken care of during the implementation and time estimations of other functionality so it should not be taken into account in the timeline or project roadmap because it is constantly being worked on. A time estimation for error handling was still provided representing how long it is believed to take if it was done all at once.

#### **User Management**

| Functionality                           | Design | Implementation | Testing | Total<br>(Hours) |
|---|--------|----------------|---------|------------------|
| User Registration                       | 5      | 8              | 5       | 18               |
| User Vehicle<br>Registration            | 21     | 5              | 8       | 34               |
| Registration by Higher<br>Level Account | 21     | 13             | 8       | 42               |
| Account Activation                      | 5      | 2              | 3       | 10               |
| Account Deletion                        | 3      | 5              | 3       | 11               |
| Account Configuration                   | 13     | 3              | 5       | 21               |
| Total                                   | 118    | 38             | 35      | 136              |

#### Security

| Functionality                 | Design | Implementation | Testing | Total<br>(Hours) |
|-------------------------------|--------|----------------|---------|------------------|
| Login                         | 3      | 5              | 5       | 13               |
| Compromised Password<br>Check | 11     | 5              | 5       | 21               |
| Password Reset                | 3      | 5              | 5       | 13               |
| Logout                        | 3      | 5              | 5       | 13               |

| Authorization | 11 | 5  | 5  | 21  |
|---------------|----|----|----|-----|
| User Privacy  | 11 | 5  | 5  | 21  |
| Total         | 99 | 38 | 36 | 102 |

# **Error Handling**

| Functionality      | Design | Implementation | Testing | Total<br>(hours) |
|--------------------|--------|----------------|---------|------------------|
| Exception Handling | 13     | 5              | 8       | 21               |
| Total              | 13     | 5              | 8       | 21               |

## **Audit Management**

| Functionality | Design | Implementation | Testing | Total<br>(hours) |
|---------------|--------|----------------|---------|------------------|
| Logging       | 13     | 3              | 5       | 21               |
| Archiving     | 8      | 2              | 3       | 13               |
| Total         | 21     | 5              | 8       | 34               |

# **System Analytics**

| Functionality               | Design | Implementation | Testing | Total<br>(Hours) |

| Notification Center | 13     | 4              | 4       | 21                 |
| Total               | 13     | 4              | 4       | 21                 |

## **Favorites List**

| Functionality          | Design | Implementation | Testing | Estimation (hours) |
|------------------------|--------|----------------|---------|--------------------|
| Managing Favorites     | 8      | 3              | 2       | 13                 |
| Favorite Parking Spots | 13     | 4              | 4       | 21                 |
| Viewing Favorites      | 4      | 2              | 2       | 8                  |
| Total                  | 25     | 9              | 8       | 42                 |

## **Timeline**

This is a specific timeline on when the team is planning on working on specific functionality. The hours shown are the total hours the functionality will take to implement, including design, implementation, and testing.

#### **Sprint 1** (9/18/18 - 10/9/18)

| BRD:          | Complete |
|---------------|----------|
| Tech Spec Doc | Complete |

#### **Sprint 2** (10/9/18 - 11/1/18)

Project Plan Complete
High Level Design Doc Complete
Revised BRD Complete

#### **Sprint 3** (11/1/18 - 12/6/18)

User Registration Delayed
Account Deletion Delayed
Account Configuration Delayed
Account Activation Delayed
Authorization Delayed
Compromised Password Check Complete

#### **Sprint 4** (1/28/19 - 2/20/19)

Data Store Structure 21 hours
Data Access Layer 21 hours
Data Restriction 13 hours
Authorization 55 hours
Login Delayed
Logout Delayed
Total 110 hours

#### **Sprint 5** (2/20/19 - 3/13/19)

User Vehicle Registration 34 hours

Lot Management:

Adding Lots 21 hours
Deleting Lots 21 hours
Logging 21 hours
SSO Project 45 hours

| Delete user from SSO portal   |
|-------------------------------|
| Delete user from SSO ind. app |

| Account Deletion | 11 hours  |
|------------------|-----------|
| Total            | 153 hours |

#### **Sprint 6** (3/13/19 - 4/3/19)

| Password Reset           | 13 hours  |
|--------------------------|-----------|
| Login                    | 13 hours  |
| User Registration        | 18 hours  |

Total: 181 hours

#### **Sprint 10** (6/13/19 - 7/4/19)

Payment System:

Total:

Balance System 55 hours
Charging system 34 hours
89 hours

## **Project Roadmap/Milestones**

The entire project, excluding removed functionalities due to time constraints, is expected to be completed by the end of the eighth sprint. The current plan is to complete that sprint by May 6, 2019. The exact end date of the eighth sprint may fluctuate by a few days. However, the end of that sprint should mark a completed system.

As for judging the progress of the project as it is being developed, functionalities were grouped into major milestones where large components of the system are completed. These milestones have projected completion dates in parenthesis next to the milestone title.

- 1. Single Sign On integration (4/3/19)
  - a. User registration
  - b. Login
  - c. Account Deletion
- 2. Base Unique Application (4/24/19)
  - a. Lot management
    - i. Adding lots
    - ii. Deleting Lots
  - b. User vehicle registration
  - c. Reservation System

- 3. Account Functionality (4/24/19)
  - a. Logout
  - b. Compromised password check
  - c. Registration by a high level account
  - d. Account Activation
  - e. Account Deletion
  - f. Account Configuration
  - g. Password Reset
  - h. Authorization
  - i. User Privacy
- 4. System Analytics (5/6/19)
  - a. Usage analysis dashboard
  - b. Logging
  - c. Archiving
- 5. Documentation (5/6/19)
  - a. View Documentation
    - i. Developer
    - ii. User Manual
  - b. FAQ
- 6. Extra Unique Functionality (7/4/19) Need extra time for these or must be dropped due to time constraints
  - a. Payments
    - i. Adding Balance
    - ii. Charging System
  - b. Favorites List
    - i. Managing favorites
    - ii. Favorite parking spots
    - iii. Viewing favorites
  - c. Notifications
    - i. Notification center
  - d. Abuse management
    - i. Submitting reports
    - ii. Viewing reports
    - iii. Verifying reports
    - iv. Fines and bans

e. Lot Management:

Editing Lots
Editing Parking Spots

# **Project Summary**

Total resources required to completely finish the project:

• Total hours: 783 hours

• Total cost: \$0

• Total sprints: 10 sprints

## **Project Plan Adjustments**

Due to time constraints from the addition of another project on the developer teams busy schedules, there either needs to be some trimming of functionality or the development team needs more time to properly finish all required functionality. The proposed edit is either add time for 2 more sprints or remove the functionality shown in sprints 9 and 10 of the timeline.

Proposed project end dates:

- If all functionality is kept: 7/4/19
- If sprints 9 & 10 are dropped, we can stay within the original time constraint: 4/24/19
